Malden City Council Malden City Hall 110 Pleasant St. Malden, MA 02148

Dear Members of the City Council:

Pursuant to Massachusetts General Laws Chapter 166 section 22, please find enclosed the petition of ExteNet Systems, Inc. for grant of location for telecommunications wires and appurtenances to be attached to a street light pole within the City of Malden. Included with the petition are detailed plans that identify the location where ExteNet's proposed pole attachment will be placed.

ExteNet requests that the City schedule a public hearing on this petition, subject to the requirements of Massachusetts General Laws, Section 22. Those requirements prescribe that the City provide written notice to all owners of real estate, abutting that part of each street upon or across which, wires appurtenances are proposed to be located. It is my understanding that the City Assessor will be able to produce this list, and I will work with the City Clerk to ensure the letters are sent per the requirements of the Town.

For the convenience of the City Council, ExteNet has provided a proposed form of order.

Should you have any questions, or would like any additional information prior to the Public hearing please do not hesitate to contact me at (617) 680-5464. I will be present at the public hearing to answer any questions you may have as well.

Thank you,

Keenan Brinn NB+C Contractor as agent for ExteNet Systems, Inc.

REGULATORY STATUS OF EXTENET SYSTEMS, INC.

Description of ExteNet Services and Facilities

ExteNet's primary telecommunications service offering is point-to-point transport of Radio Frequency ("RF") signals for Wireless Service Provider (WSP) customers via ExteNet's antenna system networks which are generally constructed with a number of remote communications nodes that are located to meet the specified needs of one or more WSP customers and connected by fiber optic cabling to a network hub facility containing communications head-end equipment that, in turn, provides bi-directional RF-optical signal conversion and interconnectivity between the network and the WSP customers' base transceiver station or other equipment. These services can be deployed to address long-standing service coverage problems such as "dead spots" in WSPs' cellular and/or PCS networks, and to enhance the WSPs' callhandling capability in the same service areas. ExteNet's network services can also improve wireless access to emergency services.

ExteNet's network telecommunications facilities consist of three primary components:

- 1. remote communications nodes comprising low elevation, low power equipment (signal converters, transceivers and antennas), to transmit, receive and convert optical signals to RF signals and RF signals to optical signals bidirectionally, typically mounted on existing utility poles;
- 2. fiber optic cables also typically attached to existing utility poles, but sometimes placed underground in existing or new conduits; and
- 3. the network head-end equipment, which is typically housed in a hub facility located within or on premises leased from private parties or municipalities.

These primary network elements are supported by various items of ancillary equipment, e.g., primary and back-up power supplies, connectors, enclosures, mounting hardware, etc. Each of these components is integral to any given ExteNet network.

The network equipment employed by ExteNet is not dissimilar in size, weight or overall appearance to items routinely installed on utility poles by Verizon and other telecommunications and electric service providers. For example, ExteNet's communications nodes and battery back-up facilities attached to poles are not unlike power supply boxes attached to poles by cable providers and other providers of telecommunications services. Pole top appurtenances, such as pole top antennas and extenders, also have been installed from time to time by utilities. As discussed below, the combination of wired and wireless technology to transport and deliver telecommunications services has been employed by Verizon and other regulated telecommunications service providers to offer regulated intrastate telecommunications services.

ExteNet's Regulatory Status as a Telecommunications Service Provider

ExteNet is a Regulated Provider of Intrastate Telecommunications Services Subject to the Requirements of the Massachusetts Department of Telecommunications and Cable and not an Unregulated Provider of Wireless services.

ExteNet is registered with the Massachusetts Department of Telecommunications and Cable ("DTC"), formerly the Department of Telecommunications and Energy ("DTE") as a provider of intrastate telecommunications services. ExteNet has a tariff on file with the DTC. ExteNet is listed on the DTC website as a regulated provider of telecommunications services.

The DTC recognizes ExteNet and similar entities as regulated providers of telecommunications services, subject to its regulation under General Laws Chapters 159 and 166, and related rules and orders. For example, ExteNet is required to adhere to DTC requirements relating to the filing of tariffs. Enclosed is a letter from Michael Isenberg, Director of the DTC, which confirms that ExteNet is and remains subject to DTC jurisdiction as a provider of intrastate telecommunications services.

ExteNet also has been recognized as a regulated provider of intrastate telecommunications services in a number of other states. To date, ExteNet has been authorized to provide intrastate telecommunications services in neighboring states such as Connecticut and Rhode Island, as well as in New York, California and numerous states in all regions of the country.

As a regulated provider of intrastate telecommunications services, ExteNet is authorized under G.L.C.166, §21 to place its wires and related equipment in public ways.

Applicable State Law

Municipal Approval of the Construction and Placement of ExteNet's Wires and Related Pole Attachments is governed by Massachusetts General Laws Chapter 166, Sections 21-22.

As a regulated provider of intrastate telecommunications services, ExteNet is authorized under Chapter 166, Section 21 to construct lines and other facilities upon, along, under and across the public ways. Such construction must not incommode the public use of public ways.

In order to obtain municipal permission to construct its telecommunications facilities in public ways, ExteNet must file a written petition with the selectmen of a City or the City Council of alderman or like body of a Town, such as the Malden City Council, pursuant to Chapter 166, Section 22. This same process has been employed routinely by carriers in the case of Verizon, Eversource National Grid, in the case of poles, wires, conduits and related appurtenances. In carrying out the permit-granting authority conferred by the General Court, municipalities act as public officers under a delegation of power from the General Court and not as agents of the municipality. Municipalities may adopt reasonable regulations for the erection of facilities by telecommunications carriers having authority to place their facilities in or under public ways.

ExteNet stands ready, willing and able to comply with the reasonable requirements of the City under General Laws Chapter 166, Sections 21-22 and related requirements imposed by the City applicable to grants of location by the CityCity Council.

Re: ExteNet Systems, Inc. Regulatory Status

Dear Mr. Mandi:

This letter verifies that ExteNet Systems, Inc. ("ExteNet") is an authorized provider of intrastate telecommunications services in Massachusetts, subject to state entry and tariffing requirements. ExteNet is duly registered with the Massachusetts Department of Telecommunications and Cable ("Department"). As required by M.G.L. c.159, §19 and the Department's entry policies, ExteNet has a valid registration statement and tariff on file with the Department, which permits it to conduct business in the Commonwealth.

Sincerely,

Michael Isenberg Director Competition Division

ADDITIONAL MATERIAL

PROJECT DESCRIPTION

The ExteNet Systems, Inc. open architecture antenna system will provide wireless voice and data transmission services for all Cellular and PCS Wireless Service Providers. The ExteNet system is an unobtrusive and aesthetically pleasing network architecture that supports all protocols (TDMA, CDMA, GSM, etc.) for all Wireless Service Providers.

Installed telecommunication facilities will include small remote nodes for transmitting RF signal, with an unobtrusive pole top antenna on light poles and utility poles.

The network will be installed using typical and commercially accepted methods. The proposed network will have two components for consideration.

The initial construction of the network deployment will be the actual node equipment installation. In each of the locations, there will be two primary components to each node installation. First, each location will have an antenna installed at the top of the pole. From each antenna installation, there will be two ½-inch diameter RF cables which will be attached to the utility pole using approved "U-Guard," which will carry the RF cable to the Radio and Power back-up modules, also mounted to the existing pole.

GROUNDING GUIDELINES:

ALL EQUIPMENT THAT IS INSTALLED AND MAY CAUSE ANY KIND OF ELECTRICAL CHARGE OR BUILD UP MUST HAVE PROPER AND ADEQUATE GROUNDING IN PLACE TO PREVENT FROM EQUIPMENT DAMAGE AND SHOCK HAZARDS. RRH'S

MUST BE GROUND TO A MAIN BUSS BAR OR HOME RUN GROUND FROM THE GROUND PIN OR STUD THAT IS ON THE CHASSIS. IF ANY EQUIPMENT HAS A GROUND POINT ON IT, IT SHOULD BE GROUND. THE GROUNDING CABLE SIZE SHOULD FOLLOW LOCAL GUIDELINES ON EQUIPMENT GROUNDING. NORMALLY THE STANARD IS 6 UV RATED STRANDED GROUND CABLE TO BE USED ON RHH'S. THE LUG NEEDS TO FIT THE PROPER CABLE SIZE AS WELL AS THE HOLE SIZE FOR THE STUD. IT STA SINGLE STUD IT SHOULD BE A ONE HOLE LUG, IF I HAS A FUACE FOR TWO HOLE LUG THEN THAT SHOULD BE USED. (I.E. COMMSCOPE ION M HAS A SINGLE STUD GROUND, TE PRISM HAS A GROUND FOR A 2 HOLE LUG.) DO NOT CUT THE LUGS TO FIT. THEY MAKE LUGS IN ALL SHAPES AND SIZES. ORDER THE CORRECT ONE AND ATTACH IT PROPERLY.

COAX GROUNDS

IN LINE GROUNDS SHOULD BE INSTALLED WITH THE PROPER SIZE GROUND KITS ON ALL COAX CABLES. THE KITS ARE INSTALLED ON FRONT AND BACK OF COAX RUNS OVER APPROXIMATELY 15 FEET. ANYTHING OVER 300 FEET NEEDS AN ADDITIONAL GROUND AROUND THE 150 FOOT MARK.

SURGE ARRESTORS

IF IT HAS A PLACE FOR A GROUND - GROUND IT.

MAST PIPES

ALL MAST PIPES SHOULD BE GROUND WITH BEAR METAL ON THE PLACE THE GROUND IS ATTACHED AND THEN COLD GALVANIZATION OVER THE BARE METAL TO PREVENT RUST. THE GROUND CAN BE ATTACHED MECHANICALLY OR AN EXOTHERMIC WELD (CAD WELD) MAY BE USED. IF THE MAST PIPE IS THE TALLEST POINT ON A BUILDING IT SHOULD ALSO HAVE A LIGHTINING ROD ATTACHED TO IT AS WELL.

DIPLEXERS/DUPLEXERS/SPLITTERS/PASSIVE COMPONENTS

IF IT HAS A PLACE FOR A GROUND TO BE INSTALLED - INSTALL IT.

ANY STRUCTURE OR FRAME SHOULD HAVE 2 GROUND WIRE, I.E. MAST PIPES, OUTDOOR ENCLOSURES, SHROUDS, BUSS BAR HOME RUN TO EARTH GROUND. ALL EQUIPMENT HAS 6 TO BUSS BARS.

BUSS BAR HOME KON TO EARTH GROUND, ALL EQUIPMENT HAS 6 TO BUSS BARS. ALL BUSS BAR HOME KON TO EARTH GROUND, ALL EQUIPMENT HAS 6 TO BUSS BARS. ALL BUSS BARS NEED TO HAVE A LINK TO AN EARTH GROUND SYSTEM AND MUST BE ISOLATED IF MOUNTED ON ANTHING THAT MAY RETAIN AN ELECTRIC CHARGE. NO EXCEPTIONS. ALL EQUIPMENT SHOULD RUN TO BUSS BARS. LUGS ON BUSS BARS SHOULD HAVE FRONT AND BACK FLAT WASHERS SANDWICHING THE LUG(S) TO THE BAR AND NOT OVERLAPPING CAUSING IT TO HOLD OR PIN DOWN OTHER LUGS ON THE BAR. THERE SHOULD ALWAYS BE A LOCK WASHER CLOSEST TO THE NUT ON THE BOLT FOR A LUG. NEVER IS IT OK TO STACK LUGS ON TOP OF EACH OTHER. IF THERE IS NOT ENOUGH SPACE, GET A BIGGER BUSS BAR. THEY SHOULD ALL HAVE A DIRECT CONTACT TO A BUSS BAR WITH NO-OX COATED BETWEEN THE LUG AND THE BUSS BAR. ALL GROUNDS SHOULD HAVE HEAT SHRINK OVER THE LUG (UNLESS IT'S NON-JACKETED WIRE). ALL LUGS NEED TO BE CRIMPED ON SECURELY WITH THE PROPER DYE AND TOOL (NOT CHANNEL LOCK CRIMPED). THERE SHOULD BE ON MORE THAN 1/16 INCH BARE CABLE SHOWING (SHINER) BETWEEN THE JACKET AND THE LUG INSIDE LUGS SHOULD HAVE CLEAR HEAT SHRINK TO INSPECT THE CIRMPS AND SHINERS. INSIDE LUGS SHOULD HAVE INSPECTION WINDOWS TO SHOW THE GROUND WIRE IS INSERTED INTO THE LUG ALL THE WAY AND IS PROPERLY INSTALLED. OUTDOOR LUGS MAY HAVE BLACK OR GREEN HEAT SHRINK.

FUSION TAPE

- 1. CHECK TO MAKE SURE ALL CONNECTORS ARE TORQUED TO PROPER SPECIFICATIONS BEFORE YOU BEGIN.

- 3. WRAP CONNECTIONS FUSION TAPE SEALANT WITH TWO LAYERS TO FORM A CONE LIKE SHAPE. FUSION TAPE MUST OVER LAP AT LEAST 50% TO FORM A PROPER SEAL. COVER ALL OF THE BARE METAL SHOWING (AT LEAST 1-1/2 INCH PAST END OF CONNECTOR.)

ENGINEERING FIRM APPLICANT 6. ALWAYS FINISH THE LAST WRAP OF TAPE GOING UP TO CREATE A SHINGLING OF THE TAPE SO IN THE WEATHER ANYTHING THAT RUNS DOWN THE CABLE WILL NOT LEAK INTO THE SEALANT. CUT THE END OF THE TAPE AND LAY IT ONTO THE FINISH. DO NOT STRETCH THE END OF THE TAPE. THIS WILL CAUSE THE TAPE TO PULL OFF OVER TIME AND CREATE A FLAGGING AFFECT. 2. NOTE: THIS STEP DOES NOT NEED A CURTSY WRAP BECAUSE THE TAPE DOES NOT ACTUALLY ADHERE TO THE CONNECTOR ITSELF BUT BINDS TO ITSELF. ALSO KNOWN AS "SELF-AMALGAMATING TAPE. SITE INFORMATION 4. IF THIS "TAPE" IS NOT PULLED TIGHT WHILE WRAPPING YOU WILL NOT CREATE A PROPER SEAL, IT MUST BE STRETCHED TO CREATE BOND TO ITSELF. 5. WRAP AT LEAST 2 LAYERS OF 3/4 INCH TAPE. EACH LAYER SHOULD COVER AT LEAST 50% OF PREVIOUS TAPE 6. ALWAYS FINISH THE LAST WRAP OF TAPE GOING UP TO CREATE A SHINGLING OF THE TAPE SO IN THE WEATHER ANYTHING THAT RUNS DOWN THE CABLE WILL NOT LEAK INTO THE SEALANT. CUT THE END OF THE TAPE AND LAY IT ONTO THE FINISH. DO NOT STRETCH THE END OF THE TAPE. THIS WILL CAUSE THE TAPE TO PULL OFF OVER TIME AND CREATE A FLAGGING AFFECT. PRE WRAP ALL CONNECTIONS WITH BLACK ELECTRICAL TAPE TO COVER ALL METAL SHOWING TO PREVENT DAMAGE TO CONNECTOR WHEN WEATHER SEAL IS TO BE REMOVED. 3/4 INCH OR 2 INCH TAPE CAN BE USED FOR THIS PROCESS. 2. USE ONLY OUTDOOR RATED HEAT SHRINK THAT HAS THE SELF-ADHESIVE WHEN HEATED PROPERLY. THIS IS WHAT WILL CREATE THE SEAL TO THE CONNECTOR. DESIGN RECORD 3. MAKE SURE HEAT SHRINK COVERS ALL OF THE COUPLERS AND CONNECTIONS. HEAT THE HEAT SHRINK TO SHRINK TIGHTLY TO THE CONNECTIONS AND CABLE. MAKE SURE THE HEAT SHRINK IS SEALED TOP AND BOTTOM OF THE CONNECTIONS. ALSO CHECK TO MAKE SURE HEAT SHRINK WAS NOT OVER HEATED AND THERE ARE NO BREAKS IN SEAL THROUGH-OUT THE SHRINK TUBING. 2 07/23/19 1 05/15/19 0 04/17/19 APPLY ONE LAYER OF 3/4 INCH BLACK TAPE AROUND ENTIRE CONNECTOR ENDING AT LEAST 1-1/2 INCHES
PAST TOP AND BOTTOM OF CONNECTOR TO PREVENT ANY MOISTURE FROM STICKING TO THE CONNECTOR. REV DATE 3. INSPECT THE DEVICE TO MAKE SURE IT IS NOT CHIPPED, CRACKED OR ANY SIGNS OF NEGLECT THAT WILL TAKE AWAY FROM MAKING A FULL SEAL AROUND THE CONNECTOR. 4. USE ONLY CORRECT SIZE PER CABLE AND CONNECTOR TYPE - I.E: 1/2 INCH FOR 1/2 INCH NOT 7/8TH FOR 1/2 INCH. 5. FOLLOW DIRECTIONS THAT COME WITH PRODUCT - MOST CLAM SHELL TYPE SEALANT DEVICES WRAP AROUND OR CLAMP AROUND A CONNECTION POINT. PROFESSIONAL STAMP 6. BE CAREFUL WHEN SETTING LOCKING DEVICE INTO PLACE ON CLAM SHELL STYLE SEALANTS (THEY ARE PLASTIC AND TEND TO BREAK OR CRACK IN EXTREME WEATHER CONDITIONS WHEN LOCKING DEVICE CLOSED TO CREATE THE SEAL.) IF THE LOCKING MECHANISM CRACKS OR BREAKS, REPLACE IT. DO NOT TAPE THE CLAMP CLOSED OR TRY TO RE-ENGINEER IT. 7. ONCE THE CLAMP IS ON AND LOCKED AROUND THE CONNECTOR THE PROCESS IS COMPLETE.

1. PLACE BOOT OVER CABLE BEFORE CONNECTOR IS ATTACHED TO CABLE. THIS IS ONLY RATED FOR PPC TYPE CONNECTORS. (NOTE: IF THIS STEP IS SKIPPED OR NOT COMPLETED BEFORE MAKING A CONNECTOR THE SUBCONTRACTOR WILL NOT BE ABLE TO USE THE BOOT STYLE DEVICE TO SEAL THE CONNECTOR. IT IS NOT RECOMMENDED TO WASTE A CONNECTOR AND CUT IT OFF AND START AT STEP NO. 1 AGAIN, SINCE PPC CONNECTORS ARE NOT REUSABLE AND CAN GET QUITE EXPENSIVE. DO NOT TRY TO STRETCH THE BOOT TO SLIDE IT OVER THE CONNECTION.)

2. PLACE THE BOOT OVER THE CABLE, AND THEN MAKE THE CONNECTOR.

4. SLIDE BOOT UP TO COVER THE ENTIRE CONNECTOR, FOLLOWING THE PPC GUIDELINES.
